

Column Name	Data type	Example	Additional info
Client ID	string	C104582	Unique identifier used to link the client across all datasets. Do not provide names, identity numbers, telephone numbers or other unnecessary direct identifiers.
Registration date	String,Date time	2026-05-03 14:25:10	Date and time at which the client registered. Use the format yyyy-mm-dd hh:mm:ss.
Age	Numeric,Integer	31	Client age at registration
Region	Categorical	Gauteng	Province or region recorded at registration.
Stated goal	Categorical	Long-term investing	Investment goal selected or stated during registration.
Risk appetite	Categorical	Moderate	Risk appetite recorded at registration.
Acquisition Channel	Categorical	Paid social	Marketing channel through which the client registered
Campaign	Categorical	CAM_2026_04	Campaign associated with the registration, where applicable.
Acquisition Cost	Numeric, decimal	180.00	Cost associated with acquiring the account. Record in South African rand, excluding the currency symbol
Registration Platform	Categorical	Mobile app	Platform through which registration was completed, where available
Registration Device	Categorical	Android	Device type or operating system used during registration, where available.

Table 2: App, Web and Onboarding Behaviour Dataset

Column name	Data type	Example	Additional info
Client ID	String	C104582	Must match the Client ID used in all other datasets.
Session Date	String, Date time	2026-05-03 14:30:12	Date and time of each app/web session.
Session Duration	Numeric, Decimal	8.5	Duration of the session in minutes. Use one consistent unit.
Screens Viewed	Integer	12	Number of screens viewed during the session.
Feature Used	Categorical	Portfolio	Feature accessed or used during the session.
Onboarding Step	Categorical	KYC	Specific onboarding step being accessed or completed
Onboarding Progress	Numeric	75	Percentage of onboarding completed at the relevant point. Values should range from 0 to 100.
Onboarding Steps Completed	Integer	5	Number of onboarding steps completed at the relevant point.
Step Completion Status	Categorical	Completed	Indicates whether the relevant onboarding step was completed, abandoned or still in progress.
Abandoned Step	Categorical	KYC	Specific onboarding step abandoned, where applicable.
Abandonment Status	Boolean	True	True if an onboarding step was abandoned; otherwise False.
First Session Flag	Boolean	True	True if the record relates to the client's first app/web session; otherwise False.

Platform	Categorical	Mobile app	Platform used for the session, such as Mobile App or Web.
Event Type	Categorical	Deposit page viewed	Specific user action or event recorded during the session, where available
Event Date	String, Date time	2026-05-03 14:35:22	Date and time at which the individual event occurred
Last Session Date	String, Date time	2026-05-10 18:21:04	Most recent session date within the agreed observation period.

Table 3: Marketing Email and Nudge Engagement Dataset

Column name	Data type	Example	Additional info
Client ID	String	C104582	Must match the Client ID used across all datasets.
Message Date	String, Date time	2026-05-04 09:00:00	Date and time the email or nudge was sent.
Message Type	Categorical	Onboarding email	Indicates whether the communication was an email, push notification, in-app nudge or other available communication type.
Campaign	Categorical	First deposit reminder	Campaign or communication campaign associated with the message.
Message Delivered	Boolean	True	True if the communication was successfully delivered; otherwise False.
Message Opened	Boolean	True	Indicates whether an email was opened, where this

			information is available.
Message Clicked	Boolean	False	Indicates whether the client clicked the communication.
Nudge Engaged	Boolean	True	Indicates whether the client interacted with an in-app nudge or similar prompt.
Time to Engagement	Numeric	2.5	Time between message delivery and engagement, measured in hours.

Table 4: Account, KYC and Funding Dataset — Target/Outcome

Column name	Data type	Example	Additional info
Client ID	String	C104582	Must match the Client ID used across all datasets.
KYC Status	Categorical	completed	Status of the client's KYC process. Suggested values include Not started, In progress, Abandoned and Completed, where applicable.
KYC Progress	Numeric	100	Percentage of KYC completed. Values must range from 0 to 100.
First Deposit Date	String, Date time	2026-05-07 11:42:00	Date and time of the client's first deposit. Blank/null if no first deposit c.
First Deposit Status	Boolean	True	Primary target variable. True = client made a first deposit within the agreed activation window; False = client did not.

Time to First Deposit	Integer	4	Number of days between registration and first deposit. Blank/null for clients who did not deposit.
First Deposit Amount	Numeric	500	Amount of the first deposit in South African rand.
Number of Deposits	Integer	3	Number of deposits during the defined observation period.
Total Deposited	Numeric	1500.00	Total amount deposited during the defined observation period, in South African rand.
Withdrawal Amount	Numeric	0.00	Total withdrawal amount during the defined observation period, in South African rand. .
Account Balance	Numeric	1500.00	Account balance at the defined observation point, in South African rand.
Activation Status	Categorical	Activated	Overall activation status according to STADIOEquities' agreed definition.

Table 5: Data Timing and Quality Requirements

Column names	Data type	example	Additional info
Observation Start	String, Date time	2026-05-03 00:00:00	Start of the period from which client behaviour will be observed.
Observation End	String, Date time	2026-05-10 23:59:59	End of the agreed predictor observation period.
Activation Window	Integer	30	Number of days after registration within which a first deposit qualifies as

			activation. The exact period must be agreed with STADIOEquities before modelling.
Record Timestamp	String, Date time	2026-05-03 14:30:12	Original timestamp of the recorded event or activity.
Missing Value Indicator	Boolean	False	Indicates whether a required field is missing. Missing values should not be replaced with arbitrary values without documentation.
Data Source	Categorical	Mobile app	Identifies the system or source from which the record originated.
Data Extraction Date	String, Date time	2026-09-07 10:00:00	Date and time on which the dataset was extracted.
